Serang Baru, Kab. Bekasi, Jawa Barat, 17334

Highly motivated 20 years old Informatics student at President University with a strong foundational knowledge in software development, cybersecurity, and digital forensics. Possesses hands-on project experience in mobile programming and backend development using technologies such as Java, Android Studio, Firebase, and Node.js. Proven ability to balance rigorous academic tasks with active organizational involvement in PUMA Informatics, demonstrating strong transferable skills in technical problem-solving, team collaboration via Agile platforms, and effective professional communication.

Education Level

President University - **Cikarang, Indonesia** Aug 2024 - Aug 2027 (Expected)

Bachelor of Informatics, 3.70/4.00

- Awarded Best Concept at the Economic Survival Exhibition for innovative digital project execution
- Served as Board of Directors (BoD) in the Secretariat division of PUMA Informatics, managing institutional documentation and cross-departmental coordination.

Work Experiences

PT. Wirajaya Erkon Mandiri - **South Tambun** Jan 2023 - Apr 2023

Helper

- Executed preventative maintenance routines for 30+ industrial AC units to guarantee continuous climate control functionality.
- Diagnosed electrical circuit faults utilizing specialized hardware tools, reducing system downtime across client facilities by 15%.
- Maintained detailed technical service logs to facilitate accurate client reporting and streamline team troubleshooting processes.

Project & Experiences

PUMA Informatics - **Cikarang, Indonesia** Oct 2024 - Jul 2026

Secretaries

- Spearheaded administrative workflows as a Board of Directors member, managing critical institutional documentation and proposals.
- Managed and archived 50+ official organizational documents, letters, and proposals to maintain operational transparency.
- Recorded and distributed concise minutes of meetings for internal evaluations to track action items and organizational milestones.

OilCycle Social Project - **Bekasi, Indonesia** Jun 2025 - Jul 2025

Secretary

- Managed comprehensive administrative structures and proposal adjustments for the community-focused OilCycle initiative.
- Coordinated cross-functional communication pathways and internal scheduling alignment to optimize volunteer mobilization timelines.

Mobile Application - **Cikarang** Nov 2025 - Dec 2025

Android Developer & Conceptualizer

- Conceptualized end-to-end application features and architecture from initial ideation.
- Designed front-end layouts and integrated database structures to manage dynamic user data.
- Programmed core application functionalities using Java within Android Studio.

Trust Your Friends? | IoT & Web Game - **Cikarang** Oct 2024 - May 2025

Hardware Quality Assurance & Debugger

A 2-player cooperative bomb-defusal game combining physical IoT hardware modules with a real-time web-based interface.

- Conducted rigorous hardware and physical module testing to identify, reproduce, and resolve critical system bugs.
- Tested cooperative gameplay flows balancing real-time communication between the defuser and instruction-reader roles.
- Assisted in software and hardware debugging to ensure seamless communication between physical device triggers and gameplay mechanics.

Project HUE | Game Development - **Cikarang** Oct 2024 - May 2025

Ensured quality assurance and gameplay stability for a fast-paced Unity 3D shooter game

A fast-paced 3D third-person shooter game built with Unity, featuring dynamic combat systems and cel-shaded visual effects.

- Executed comprehensive gameplay testing to detect visual, mechanical, and technical bugs within the Unity environment.
- Analyzed bug reports and modified underlying code scripts to fix functional errors and optimize game performance.

3D Modeling & Assets Project - **Cikarang** Oct 2025

Created 3D visual assets and animations tailored to project requirements

- Modeled 3D assets and environmental elements using 3D design software.
- Pitched and refined creative concepts, high-level ideas, and aesthetic direction for 3D visual elements.
- Rigged and animated models to deliver smooth, functional motion sequences for interactive use.

Roblox Interactive Experience - **Cikarang** Nov 2025 - Dec 2025

Game Conceptor & 3D Asset Modeler

- Tested player navigation and gameplay flow to optimize interactive task execution and user engagement.
- Modeled custom 3D environmental assets and props suited for the Roblox Studio engine.
- Conceptualized core storyline progression, puzzle tasks, and interactive game mechanics for players to escape the environment.

Capture The Flag (CTF) Security Challenge - **Cikarang** Oct 2025

CTF Team Member & Security Researcher

A hands-on cybersecurity challenge focused on identifying vulnerabilities and executing digital forensics within a 3-member team.

- Collaborated in a 3-member team to analyze, exploit, and solve hands-on cybersecurity challenges.
- Analyzed web application vulnerabilities, parameter tampering, and authentication flaws to exploit security bypasses.
- Investigated digital evidence and network traffic logs using Wireshark, Autopsy, and NetworkMiner to analyze packet captures and recover hidden flags.
- Decoded complex cryptographic ciphers and analyzed binary files to identify reverse engineering mechanisms.

Skills

- **Achievements** (2025): 2nd Place Winner — Economic Survival Exhibition
- **Skills**: UI/UX Implementation, Game Design & Mechanics, 3D Asset Modeling, Problem Solving, Team Collaboration
- **Technical**: Java, Lua, Android Development, Front-End Development, Database Management, IoT Hardware Integration, Unity Engine
- **Tools**: Android Studio, Blender, Roblox Studio, Firebase, GitHub, Autopsy, NetworkMiner, Wireshark, AperiSolve
